Temperature Checking Facial Scanners

How can you turn a routine temperature check into a sophisticated digital amenity? By replacing commonplace handheld forehead thermometers with streamlined screens. Modern safety scanning devices resemble familiar tablet technology, while allowing for socially distanced temperature monitoring and facial recognition scanning. Members are impressed with the elegance of experience and feel greater peace of mind while enjoying the club facilities.

Safety as a Digital Amenity

- **Provide a streamlined member experience:** Handheld temperature devices make members feel like they are at the doctor's office, rather than a premium private club. Cobalt Access devices provide a sleek interface that reflects well on your club and matches the sophisticated tone your members have come to expect.

- **Enforce safety policies:** The facial scanning ability of the Cobalt Access scanners turn the indicator green when a member's temperature is clear to enter, and red when their temperature is outside the specified range. The facial recognition functionality also determines whether members are wearing masks, making it easier and less awkward for club staff to enforce mask wearing policies.

- **Remain socially distant:** Members can self-serve at the temperature checkpoint, removing the need for staff to enter members' personal space. This helps enforce safety protocols for the benefit of both members and staff.

- **Ensure return on investment:** More than just thermometers, the Cobalt Access devices are also facial recognition devices. Recognizing individuals allows the devices to determine access rights to buildings or serve as an employee time clock. This extends their lifespan beyond the pandemic and ensures your club can use them for years to come.

Cobalt Access Provides:

- A sleek digital interface for safety monitoring and enforcement
- LED-lighted stands for freestanding and simple installation
- Modern technology to coordinate with sophisticated design environments
- Temperature checks at a distance
- Notification when temperatures are out of range
- Notification when members are not wearing masks
- Multi-use applications for long term return on investment
- The ability to recognize employees by their faces, even when wearing masks

COBALT SOFTWARE
Modernizing Club Management

Cobalt Access is a digital amenity powered by **Cobalt Software**. Other suites offered include **Cobalt Engage**, a digital engagement platform including club website, member app, and marketing tools, **Cobalt Gather**, management solutions for in-person club events and amenities such as golf, spa and tennis, and **Cobalt Core** for back of house operations such as membership and accounting. All solutions are natively integrated with one another and can be acquired as a full platform or purchased as standalone solutions.
