Club Management
Systems for Operations

Club staff members are typically tasked with getting a lot done in a short amount of time. Your team members cannot afford to be stuck using outdated software that bogs them down with time-intensive workarounds or unresponsive support. Empower your employees to get more done in less time with the new option for club management software. Built from the ground up to meet the needs of the most demanding clubs, Cobalt Core systems remain intuitive, user-friendly, and interoperable, and are supported by a responsive support team.

Streamlined Operational Systems for the Back Office

- **Accounting System:**
  Accounting is the backbone of successful club management. Effectively manage accounts receivable, generating member statements and automatically generating delinquent and suspension letters based on your club's rules. Manage accounts payable, creating invoices to post to GL, printing checks for vendors, and printing yearly 1099 forms. Maintain an accurate general ledger to ensure your club's finances are accurate, auditable, and reportable.

- **Membership System:**
  A flexible and powerful membership system is a must for any private club. The system must track all kinds of memberships, recurring charges, partner members, dependents, membership status, and guests with ease. Member information stays up to date and flows through to other systems such as retail POS, facilities check-in, and the accounting system to make sure the right members are using the club and that all charges are reflected accurately on the member's statements. Additional features such as

property transactions and the annual proforma process keep your club running smoothly.

- **Inventory Receiving System:**
  A full-featured inventory receiving system that integrates seamlessly with the accounting general ledger is imperative. Easily create and share purchase orders with vendors electronically. Facilitate flow of retail items from receiving to transferring through to the point-of-sale. Track and audit all items, allowing for quick and seamless month end processes. Conduct inventory accurately while operations are still open for maximum flexibility.

- **Retail POS System:**
  Run all your retail, facilities check-in, and dining reservations check-in through one fully integrated POS system. The POS is integrated into other Cobalt modules such as Golf and Spa and Fitness, and Dining, or available as standalone for retail shops. The POS directly integrates with the accounting and membership systems, so member statements remain accurate and up to date.

HR and Recruiting System:

Many country clubs rely heavily on seasonal hiring each year. Keeping recruiting streamlined and organized is imperative. A specialized recruiting system built for the needs of clubs provides an intuitive and easy-to-use workflow, from recruitment and job posting, to interview process, and ultimately to employee onboarding. Additionally, an automated process for mass employee loading makes seasonal onboarding a breeze.

Service Request Management:

- Users can report issues across the property requesting service from Facilities Maintenance, IT, Housekeeping, and track their progress

- Automatic assignment of service requests to personnel based on their expertise

- Manage projects with multiple assigned duties

- Identify and manage team member workloads throughout the day

- Automated notifications of service requests' status and completion

- Plan and reduce costs with the preventative maintenance scheduler

Powerful Integration for All Module:

- All Cobalt Core Modules work with one another to provide a completely integrated back of house management system, or purchase system a la carte to meet your needs

- Cobalt integration manager and Cobalt integration services can connect with your existing club management systems, golf system, food and beverage system and more

- Integrates with all Cobalt Engage digital amenities and all Cobalt Gather management systems

COBALT SOFTWARE

Modernizing Club Management

Cobalt Core is suite of modules for back of house operations such as membership, accounting, Retail POS, and inventory. Other suites offered include **Cobalt Gather**, management solutions for in-person club services and amenities such as golf, spa and tennis, and **Cobalt Engage**, a suite of Digital Amenities to enhance Member Experience. All solutions are natively integrated with one another or may be purchased a la carte as standalone solutions.
